

SOUTH BAY PATHOLOGY SOCIETY

CASE ACCESSIONS

WEB SITE: SOUTHBAYPATH.ORG

**Garden Court Hotel
520 Cowper Street
Palo Alto, CA 94301**

FOR THE MEETING ON FEB 4, 2019 @ 7pm

SB 6351 Charles Lombard; El Camino Hospital

61-year-old male with NMDAR auto-immune encephalitis and pancytopenia. Bone marrow aspirate/biopsy performed: DRESS syndrome?

DIAGNOSIS: _____

SB 6352 Sebastian Fernandez-Pol/Kerri Rieger/Roberto Novoa; Stanford

44-year-old female with 0.4x0.4cm purple papule.

DIAGNOSIS: _____

SB 6353 Sebastian Fernandez-Pol/Kerri Rieger/Roberto Novoa; Stanford

15-year-old female who developed waxing and waning neurologic symptoms in May 2017 involving mainly cranial nerves. In March 2018 she complained of foot numbness, progressive lower limb weakness eventually requiring use of a wheelchair. In addition she develops loss of sphincter control and marked stiffness. Skin lesions appeared in September 2017 characterized by macules and papules on both lower limbs, then appearing on the trunk and upper limbs and sparing the face. The lesions are non-painful and non-itching.

DIAGNOSIS: _____

SB 6354 Romain Cayrol/Donald Born; Stanford

2-year-old boy with an orbital mass.

DIAGNOSIS: _____

SB 6355 Sanjay Kakar; UCSF

28-year-old female with h/o cervical dysplasia, obesity, and hypothyroidism. Resection for 13cm liver mass. No other known mass lesions.

DIAGNOSIS: _____

SB 6356 Jeff Cloutier/Hannes Vogel; Stanford

18-year-old female with h/o progressive lower back pain over past 8 months and recent increased difficulty with urination. MRI: 2.9cm mass identified filling right S1 subarticular space, intimately associated with the exiting right S1 nerve root.

DIAGNOSIS: _____

SB 6357 Erna Forgo/Christine Louie; Stanford/Palo Alto VA

75-year-old male with hematuria and no significant past medical history. Urine cytology specimen and TURBT submitted.

DIAGNOSIS: _____

SB 6358 Rebekah Wieland/Ryanne Brown/Christine Louie; Stanford/Palo Alto VA

90-year-old male presenting with 3mm brown papule with slightly waxy appearance on left arm for past several months without change.

DIAGNOSIS: _____

SB 6359 Francisco Beca/Brooke Howitt; Stanford

28-year-old female, G0P0, with vaginal bleeding and pain.

DIAGNOSIS: _____

SB 6360 Neda Mirzamani/Linlin Wang/Sonam Prakash; UCSF

45-year-old male presented with weakness in upper extremity and aphasia. During imaging studies CT of brain shows left basal ganglia hemorrhage (5.7 cm). Patient also has massive splenomegaly (34 cm in diameter). No significant adenopathy identified.

DIAGNOSIS: _____
